

TOR

Are any of your organizations trusted network assets behaving as TOR relays, bridges, or devices?

To find out, enable Lumeta to ingest [NetFlow v9](#) (or netflow from a similar flow-collection infrastructure) and also enable a threat intelligence feed containing TOR intelligence data such as [iDefense](#).

Note: The standard [Lumeta requirements](#) are not inclusive of this integration. Additional storage may be required to index a TOR feed.

Configure the TOR feed as follows:

1. On Lumeta's main menu, browse to **Settings > Integrations > Open Source Feeds > TOR**.
2. Enable the threat feed by sliding the toggle button to **On**.

On

Polling Interval (by Hour)

12

Submit

3. Input a Polling Interval to indicate the time that should elapse between fetching the latest feed data. Input 24 to poll daily, for example, of 12 to poll twice a day.
4. Click **Submit**.
Feed is configured.
