- [Granting Permission to Use the Lumeta ePO Extension](#)
- [Installing the Lumeta Extension on the McAfee ePO Server](#)

The McAfee ePO integration provides McAfee ePO customers with a way to ensure that the ePO agent is installed comprehensively on all network devices in a particular segment (or multiple segments) as intended. The integration reconciles McAfee findings with Lumeta findings and in so doing, uncovers:

1. Assets lacking the McAfee ePO agent, which show up in Lumeta-only dashboard widgets and in the McAfee ePO console.
2. Assets to which visibility is blocked, which show up in McAfee-only dashboards widgets and in the McAfee ePO console.
3. Assets with comprehensive management, which show up in both McAfee and Lumeta dashboards widgets and in the McAfee ePO console. A McAfee user with read-only permissions for the following parameters will be able to configure and use in this integration:
 - Queries & Reports
 - Software
 - Software Manager
 - System Tree Access

Lumeta Lumeta accomplishes this by fetching McAfee ePO-managed data, comparing it to Lumeta-discovered data within the same network space, and then pushing the findings back to the ePO server. This ensures on a continual basis that ePO has the complete set of networks and devices to manage.

Lumeta Version	EPO Version	EPO Plugin Needed
3.5	5.03	LumetaRemoteCommandPush-preEPO5.10
3.5	5.10	LumetaRemoteCommandPush-EPO5.10-Lumpre4.0
4.0 or greater	5.10	LumetaRemoteCommandPush-EPO5.10-Lum4.0
