

Validate the Upgrade

After an upgrade, make sure the system identifies as the version you just installed.

Here's how:

1. [Log in](#) via the Lumeta browser interface using default login credentials:

Username	Password
admin	(732)357-3500

2. To confirm the system is running the latest version, click **Settings > Lumeta Systems** and check the System Information panel.
3. Check the Lumeta Version field to ensure that you're running the intended version.
4. Check your system to ensure that your configuration settings are intact. Include users, roles, organizations, zones, collectors and the system connection in your check. Also validate the availability of custom dashboards, custom reports, and widgets.

In the unlikely event any configuration data was lost, restore it from your backups.

Asset to Restore, if necessary	Backup Location
Custom attributes	Settings > Zones > Custom Attributes > Upload
Device profile patterns	Settings > Device Profile Patterns > Import
Notifications	Reports > Browse Real-time > Import
Custom Dashboards & Reports	User Profile > Settings > Import
<ul style="list-style-type: none">• Lumeta System Connections• Organizations• Zones• Collectors• Custom Attributes by Zone• Users• Notification Subscriptions	Settings > Support Tools > Import/Export System Configuration > Import
