

BlueCat Plug-in Download & Installation

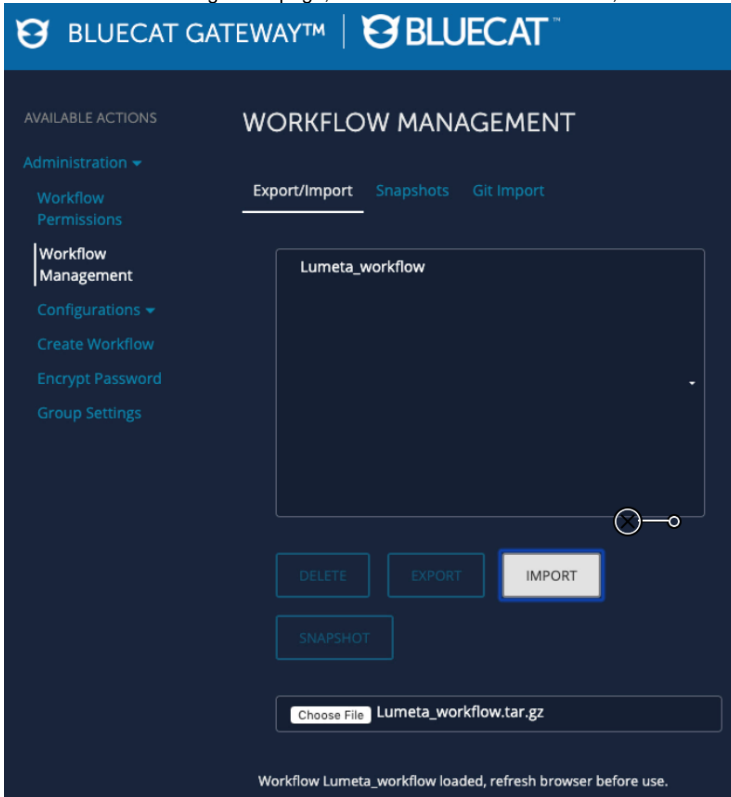

Lumeta fetches BlueCat-managed addresses, compares them to Lumeta-discovered addresses within the same network space, and then pushes the differences back to the BlueCat address manager. This is done on a continual basis and ensures that BlueCat Address Manager has an authoritative set of IP addresses to manage.

Play this video to learn how how to install the plug-in. For the best viewing, expand the player to full screen and in Settings, select Auto 1080p HD as the playback quality.

Installation

Alternatively, you can use the this installation procedure:

1. Save [Lumeta_workflow.tar.gz](#) file to your local directory.
2. Log in to your BlueCat Gateway server.
3. On the Workflow Management page, in the Available Actions column, select **Workflow Management**.

4. At the bottom of the page, select **Choose File**.
5. Browse to and select the [Lumeta_workflow.tar.gz](#) file you saved locally, then click **Import**.
6. Select **Lumeta_workflow** and then **Workflow Permissions**.
7. Select **Lumeta_workflow** and then in the Pages section, **lumeta_workflow_page()**.

8. Add two new group names: **admin** and **all**.
